<td>CSF</td>
<td>Clean container without additives</td>
<td>In sterile container without additives: 1 ml. Freeze. Note: Blood contamination can interfere with test results.</td>
<td>Ship frozen sample on dry ice with overnight delivery.</td>

<td>Red Blood Cells, Washed</td>
<td>RBC</td>
<td>Sodium Heparin (Green Top)</td>
<td>Washed Red Blood Cell Preparation: <strong>Step 1:</strong> Centrifuge the whole blood at 3000rpm (1800rcf) for 5 minutes. <strong>Step 2:</strong> Remove plasma and buffy coat layer. <strong>Step 3:</strong> Resuspend the red cells in normal saline (0.9% NaCl) with approximately 2 times the volume of the red cells, and invert the tube to mix. <strong>Step 4:</strong> Centrifuge for 5 minutes at 2000 rpm and discard the supernatant. <strong>Step 5:</strong> Repeat Steps 3 &amp; 4 twice for a total of 3 washes or until the supernatant is clear. <strong>Step 6:</strong> Completely remove the supernatant and freeze the red cells at -20°C, preferably at -80°C. Ship frozen.</td>
