Senior-Loken Syndrome: Sequencing Panel

Test Code: MM235  
Turnaround time: 6 weeks  
CPT Codes: 81406 x1, 81408 x1, 81479 x1

Condition Description

Senior-Loken syndrome is an autosomal recessive retinal-renal syndrome with clinical features of nephronophthisis and Leber congenital amaurosis (LCA).

Genes

**CEP290, INVS, IQCB1, NPHP1, NPHP3, NPHP4, SDCCAG8**

Indications

This test is indicated for:
- Confirmation of a clinical diagnosis of Senior-Loken syndrome.
- Carrier testing in adults with a family history of Senior-Loken syndrome.

Methodology

**Next Generation Sequencing:** In-solution hybridization of all coding exons is performed on the patient's genomic DNA. Although some deep intronic regions may also be analyzed, this assay is not meant to interrogate most promoter regions, deep intronic regions, or other regulatory elements, and does not detect single or multi-exon deletions or duplications. Direct sequencing of the captured regions is performed using next generation sequencing. The patient's gene sequences are then compared to a standard reference sequence. Potentially causative variants and areas of low coverage are Sanger-sequenced. Sequence variations are classified as pathogenic, likely pathogenic, benign, likely benign, or variants of unknown significance. Variants of unknown significance may require further studies of the patient and/or family members.

Detection

**Clinical Sensitivity:** Unknown. Pathogenic variants in the promoter region, some pathogenic variants in the introns and other regulatory element pathogenic variants cannot be detected by this analysis. Large deletions will not be detected by this analysis. Results of molecular analysis should be interpreted in the context of the patient's clinical and/or biochemical phenotype.

**Analytical Sensitivity:** ~99%.

Specimen Requirements

Submit only 1 of the following specimen types

**Type: Whole Blood**

Specimen Requirements:
- In EDTA (purple top) tube:
  - Infants (2 years): 3-5 ml
  - Older Children & Adults: 5-10 ml.

**Type: Isolated DNA**

Specimen Requirements:
- In microtainer: 60 ug
- Isolation using the Qiagen™ Puregene kit for DNA extraction is recommended.

Special Instructions

Please include fundus photographs, electroretinogram (ERG) findings, visual field findings, and visual acuity, if available, for expert review and clinical correlation with test results.
