Hypohidrotic Ectodermal Dysplasia: Deletion/Duplication Panel

**Test Code:** MD420  
**Turnaround time:** 2 weeks  
**CPT Codes:** 81228 x1

### Condition Description

Most cases of hypohidrotic ectodermal dysplasia are thought to be caused by mutations in the *EDA*, *EDAR*, and *EDARADD*. These genes produce proteins that form part of a signaling pathway critical for the interaction between the ectoderm and mesoderm cell layers. Ectoderm-mesoderm interactions are essential for the formation of several structures that arise from the ectoderm, including the skin, hair, nails, teeth, and sweat glands.

Hypohidrotic ectodermal dysplasia has several different inheritance patterns. Most cases are caused by mutations in the *EDA* gene, which are inherited in an X-linked recessive pattern. *EDAR* mutations can have an autosomal dominant or autosomal recessive inheritance pattern, while *EDARADD* mutations have an autosomal recessive inheritance pattern.

**Reference:** GeneReviews.

### Genes

*EDA*, *EDAR*, *EDARADD*

### Indications

The test is indicated for:

- Individuals with a clinical or suspected diagnosis of hypohidrotic ectodermal dysplasia.

### Methodology

**Deletion/Duplication Analysis:** DNA isolated from peripheral blood is hybridized to a gene-targeted CGH array to detect deletions and duplications. The targeted CGH array has overlapping probes that cover the entire genomic region.

**Detection**

**Deletion/Duplication Analysis:** Detection is limited to duplications and deletions. The CGH array will not detect point or intronic mutations. Results of molecular analysis must be interpreted in the context of the patient's clinical and/or biochemical phenotype.

### Specimen Requirements

**Submit only 1 of the following specimen types**

**Type: Whole Blood (EDTA)**

**Specimen Requirements:**

EDTA (Purple Top)  
Infants and Young Children (2 years of age to 10 years old): 3-5 ml  
Older Children & Adults: 5-10 ml  
Autopsy: 2-3 ml unclotted cord or cardiac blood

**Specimen Collection and Shipping:**

Ship sample at room temperature for receipt at EGL within 24 hours of collection. Do not refrigerate or freeze.

**Type: DNA, Isolated**

**Specimen Requirements:**

Microtainer  
3 µg  
Isolation using the Perkin Elmer™Chemagen™ Chemagen™ Automated Extraction method or Qiagen™ Puregene kit for DNA extraction is recommended.

**Specimen Collection and Shipping:**

Refrigerate until time of shipment in 100 ng/µL in TE buffer. Ship sample at room temperature with overnight delivery.
