# STAT: Amino Acid Profile, Plasma

**Test Code:** BAAST  
**Turnaround time:** 1 day (Turn around time is 4 hrs to 1 day from date and time of receipt at EGL)  
**CPT Codes:** 82139 x1, 81479 x1

## Condition Description

Plasma amino acid analysis will detect specific amino acid disorders such as phenylketonuria (PKU), maple syrup urine disease (MSUD), urea cycle defects, non-ketotic hyperglycinemia, and homocystinuria. Quantitative analysis of amino acids can also be performed to monitor established patients diagnosed with metabolic disorders. Plasma amino acid values are compared to age-matched normal values.

## Indications

This test is indicated in the case of:

- Patients experiencing a metabolic crisis.  
- Evaluation of patients with signs of a possible metabolic condition, such as lethargy, vomiting, and failure to thrive.  
- Monitoring known metabolic patients who have been hospitalized and for which a rapid analysis is essential.  
- Infants with a positive newborn screening result indicative of a metabolic disorder.

## Methodology

Quantitative ion exchange chromatography, reported as micromoles/L.

## Detection

This test is very sensitive for specific amino acid disorders, but detection can also be sensitive to the clinical and nutritional status of the patient.

## Specimen Requirements

**Submit only 1 of the following specimen types**

**Type: Plasma**

**Specimen Requirements:**  
Sodium Heparin (Green Top)  
1-2 ml  
Sample should be collected while fasting or 2-4 hours post prandial. Centrifuge to separate plasma and freeze.

**Specimen Collection and Shipping:**  
Ship frozen sample on dry ice with overnight delivery.

## Special Instructions

Please indicate any medications or dietary changes on the test requisition form.

**STAT TESTING MUST BE COORDINATED WITH AND PREAPPROVED BY ONE OF THE DIRECTORS IN THE BIOCHEMICAL GENETICS LABORATORY. Please call 855-831-7447.**
